Key Skill

Single Page Applications
Design Patterns
API & Server Development
SQL Development
Data Structures

Education

Lambda School
Dec.2020 – Sept.2020

Highly selective accelerated 9-month software engineering training program designed to give students strong foundation in computer science and the practical technical skills to become world class software engineer.

Objective

I am an enthusiastic and self-motivated junior developer looking for a company I can grow with while it challenges both my technical capabilities and problem-solving techniques. I'm a hard-working developer, ready to challenge any difficulties that arises, quick learner of new technology stack and just a winning personality.

Experience

- *Experience with both multi-page and single page applications*
- *Experience with Dynamic Routing*
- *Experience with front end framework such as ReactJS to create friendly User Interfaces.*
- *Experience with Restful API and its 6 guiding constrains*
- *Experience with database management systems*
- *Experience with data structures and how to measure an algorithm with Big O notation.*
- *Knowledge of SCRUM methodology and how to apply it to projects*

Projects:

Sauti Project – Trading goods and services

- Worked on Sauti as the UI developer right along side 5 other developers. Cross-functional
- Used Semantic HTML and less to build page landing page.
- Preprocessing using LESS to style landing page.

ProHash – Project management application

- Implemented the React library to build the front-end side of this application
- Build an API using NodeJS & ExpressJS adding authentication for user sign up and login pages
- Used styled components for a more dynamic and user-friendly design.
- User can add, delete, and edit, this is done by building endpoint and using AJAX implementation on the front end.
